About the Seventeenth Annual Colloquium

This year's virtual colloquium is dedicated to addressing the extraordinary opportunities and projected challenges created by discoveries in the genetic, molecular, and cellular mechanisms that make aging a significant risk factor and driver of many of the later life chronic conditions and diseases.

National and international authorities will gather live via Zoom to consider the personal and clinical impacts and implications of advances in the science of aging from physical, cognitive, psychological, technological, ethical, economic, and social perspectives.

Attendees will leave understanding: 1) the importance of immune response and regenerative capacity in the face of injury and disease as we age and their implications for quality of life and clinical intervention; 2) how the aging process affects the disease process and susceptibility -and vice versa; 3) the importance of three key pathways to health and long life - patterns of conscientiousness and persistence, physical activity, and social relationships; and 4) the current debates on maximum life expectancy and life span.

- Regular registration fee: \$30.
- Maine Gerontological Society members: \$15.
- Students and adults 65 years and older: Free

Continuing Education Credits Available

The AOA Council on Continuing Medical Education approved this CME Activity for a maximum of 5.75 hours of AOA Category 2-A CME credits. UNE COM designates this CME activity for a maximum of 5.75 AMA PRA Category 1 Credit(s) TM, and 5.75 University of New England contact hours for non-physicians. Contact hours may be submitted by non-physician, non-PA health professionals for continuing education credits.
