

CONNECTIVITY AND CROSS-SYSTEM LINKAGES IN WATERSHED AND COASTAL ECOSYSTEMS

Mažeika Sullivan

Ohio State University

School of Environment and Natural Resources

Tuesday, November 12th, 2:00 pm
Room: CSL 1003 (Chemistry Auditorium)

Natural environmental variability and human activities shape biodiversity, food-web organization, and ecosystem function in linked aquatic-ecosystems.

Dr. Mažeika Sullivan is an Associate Professor at The Ohio State University (OSU) and the Director of the Ramsar-designated Schiermeier Olentangy River Wetland Research Park. He is a Distinguished University teacher and served as a Fulbright Distinguished Chair of Biodiversity and Sustainable Development. His research addresses the ecology and conservation of stream, river, and wetland ecosystems, from headwaters to estuaries. To date, Dr. Sullivan has published more than 50 peer-reviewed articles and three book chapters. Dr. Sullivan conducts research in multiple geographic regions of the U.S. and internationally in Eastern Europe, the Caribbean, and South America.
